DETAILED ACTION

Claims 1-4 have been cancelled by Applicant. Applicant's questions regarding the manner of making amendments can be found in MPEP 37 CFR 1.121 and 608.01 (q). As previously stated in the last office action, due to large amount of new matter and because the substitute specification was improperly amended, the substitute specification will not be entered with the exception of the claims. Claims 5-9 will be entered in order to advance the prosecution of the case.

Claim Rejections - 35 USC § 112

1. The following is a quotation of the first paragraph of 35 U.S.C. 112:

The specification shall contain a written description of the invention, and of the manner and process of making and using it, in such full, clear, concise, and exact terms as to enable any person skilled in the art to which it pertains, or with which it is most nearly connected, to make and use the same and shall set forth the best mode contemplated by the inventor of carrying out his invention.

2. Claims 5-9 are rejected under 35 U.S.C. 112, first paragraph, as containing subject matter which was not described in the specification in such a way as to reasonably convey to one skilled in the relevant art that the inventor(s), at the time the application was filed, had possession of the claimed invention. .

The specification, as it was originally filed did not include support for "submillimeter" image switches as is recited in claim 5 and in addition the specification, as it was originally filed , did not make reference to liquid crystal devices (claim 9) and laser diode arrays (claim 8).

Deletion of the new matter is required.

Claim Rejections - 35 USC § 102

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in-

(1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effect under this subsection of a national application published under section 122(b) only if the international application designating the United States was published under Article 21(2)(a) of such treaty in the English language; or

(2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that a patent shall not be deemed filed in the United States for the purposes of this subsection based on the filing of an international application filed under the treaty defined in section 351(a).

4. Claims 5-9 are rejected under 35 U.S.C. 102(e) as being anticipated by Sullivan et. al.,

U.S.P. No.6,466,185.

Sullivan et. al. '185 teaches (Figs.1-24) an optical imaging device comprising: an image projector 20 comprising an array of laser diodes, array of optical elements 36,38,40,42 that can be liquid crystals or utilize MEMS switches (see Col.12, lines 49-68) in order to display images, which clearly, fully meets Applicant's claimed limitations.
